Harley Evolution Engine 1984 - 1999 Overview | FMH Video

The Evolution engine is an air-cooled, 45-degree, V-twin engine manufactured from 1984 by Harley-Davidson for the company's motorcycles. It was made in the 1,340 cc displacement for Harley-Davidson Big V-twins bikes, replacing the Shovelhead engine until 2000 when the last EVO was placed in a production factory custom FXR4. In 1999, it was replaced by the Harley-Davidson Twin Cam 88 in the Touring and Dyna model and in 2000 in the Softail models. Also available in the Sportster model beginning i

They made a reliable coast-to-coast engine. In the Big Twin models, the Evolution engine was offered only in the 82ci size. This displacement provided more than enough power and torque for HD ' s bigger bikes. Horsepower increased 10% and torque increased 15% from the Shovelhead. Also part of the engine redesign was better lubrication and a reliable ignition system. Many Shovel owners reverted their ignition back to points because it was more reliable.
