The effective use of airborne weather radar is essential to anyone flying radar-equipped aircraft. Numerous aircraft accidents have occurred due to flight crews' inadequate knowledge of thunderstorms and the use of radar. Airborne Radar helps provide that basis of knowledge. The goal is to provide the best radar training available, to make the pilot confident and knowledgeable about thunderstorm hazards. Who is Airborne Radar For? • Professional/career pilots seeking to

Fiction: Weather radar will detect fog, ice crystals and small dry hail. It can also detect other aircraft in flight. Fact:

Weather radar detects moisture. It detects wet hail, rain and wet snow, but not dry hail or dry snow. The larger the water droplets, the stronger the return signal. It cannot detect other aircraft in flight. Fiction: The weather radar's energy is reflected by the weather it detects.

Weather radar, also called weather surveillance radar (WSR) and Doppler weather radar, is a type of radar used to locate precipitation, calculate its motion, and estimate its type (rain, snow, hail etc.). Modern weather radars are mostly pulse-Doppler radars, capable of detecting the motion of rain droplets in addition to the intensity of the precipitation.
