Antenna Azimuth Position Control System Solution

Recognizing the pretension ways to acquire this books antenna azimuth position control system solution is additionally useful. You have remained in right site to begin getting this info. get the antenna azimuth position control system solution associate that we provide here and check out the link.

You could purchase lead antenna azimuth position control system solution or acquire it as soon as feasible. You could quickly download this antenna azimuth position control system solution after getting deal. So, with you require the book swiftly, you can straight get it. It's thus very easy and consequently fats, isn't it? You have to favor to in this aerate

antenna azimuth position control system. Replacing the power amplifier gain with unity and letting the pre-amplifier gain K equal to 1000, we find $G(s)$ and closed loop transfer function $T(s)$ as: $G(s) = 66.3/s(s+1.71)$ and $T(s) = 66.3/s^2 + 1.71s + 66.3$ From above equation of $T(s)$ we get $n = 8.14$ and damping ratio = 0.105.

The antenna azimuth position control system turns the input command in output position. This system is widely used in antennas, robots and computers disks. In this paper we present the systems that are managed with azimuth antenna. We ' re going to show how the system works and how its performance can be improved.

Antenna Azimuth Position Control System Solution

The issue of antenna azimuth position control has become one of the many aspects that have drawn the attention of researchers in the control of antenna placement. These interests are due to the...

Block diagram of antenna-azimuth position controlling system. The process starts with the turning of input angular rotation by the potentiometer in to a voltage. Similarly, in the output region, the potentiometer converts the rotation angle to voltage, and returned back to. the input with a feedback.

A position control system converts a position input command to a position output response. Position control finds widespread applications in antennas, robot arms, and computer disk drives. The radio telescope antenna in Fig. 1 is one example. The purpose of this system is to have the azimuth angle output follow the input angle.

The CP controls only the antenna position (external loop) with references obtained from a text file that contains the desired positions for each time interval (sampling period, $h=1s$). The proposed controller for the station was a PI, due to its simplicity, large operation band and good industrial practical results.

CONTROL SYSTEM FOR SATELLITE TRACKING ANTENNA - ScienceDirect

The goal of this study is to ensure the minimum angle deviation after the antenna is rotated. For this purpose, the antenna position control system is designed in MATLAB/Simulink and PID, fuzzy logic and sliding mode controllers are performed to the system. The simulation results are compared and the most suitable control method is determined.

Antenna azimuth position control with PID, fuzzy logic and ...

In this study, an antenna azimuth position control system is controlled by using a Proportional-IntegralDerivative (PID) controller and a fuzzy logic controller (FLC) designed in Matlab/Simulink environment. [...] Key Method In order to obtain the best system response with FLC, different types of fuzzy rules and membership functions are tested.
