Manual Defrost . It's typically recommended that a freezer should be defrosted when the frost has become about a quarter- to a half-inch thick. Defrosting a freezer manually is a hands-on, time-consuming, and tedious task. The process involves unplugging the appliance, removing everything from the freezer, and pulling off large pieces of frost to speed it up.

I have not raised the front feet as mentioned in the manual. That would probably create enough of a "lean back" to solve the problem. This fridge is black. GE discontinued almond after the late 1990s, but the black panels on the front of my old 1986 range and dishwasher tie in beautifully with the black refrigerator.

A self-defrosting upright freezer constantly cycles on and off which makes it noisier than a manual defrost chest freezer. As the freezer cycles, you'll hear normal noises like whooshing and whining several times throughout the day. The compressor also makes infrequent noises. Consider the noise factor when deciding where to place an upright ...

While a chest freezer typically requires more floor space, it's usually more energy efficient, since the door opens from the top and allows less cold air to escape. Consider a manual defrost model. Manual defrost freezers use half the energy of automatic defrost models, but must be defrosted periodically to achieve the energy savings.
