How paper is recycled. Paper is taken from the bin and deposited in a large recycling container along with paper from other recycling bins. The paper is taken to a recycling plant where it is separated into types and grades. The separated paper is then washed with soapy water to remove inks, plastic film, staples and glue. The paper is put into a large holder where it is mixed with water to create 'slurry'.

~~How paper is recycled - Recycling Guide~~

The recycling of paper is the process by which waste paper is turned into new paper products. It has a number of important benefits: It saves waste paper from occupying homes of people and producing methane as it breaks down. Because paper fibre contains carbon, recycling keeps the carbon locked up for longer and out of the atmosphere. Around two-thirds of all paper products in the US are now recovered and recycled, although it does not all become new paper. After repeated processing the fibres

~~Paper recycling - Wikipedia~~

Stage 2: Recycling. The start of the paper recycling process requires the paper to be separated into types and grades. The paper is then washed to remove any film, glue, ink and other contaminants using soapy water. Once washed the paper is then transfered to a large container, where it is mixed with water to create a pulp.
