The copper foil used in circuit boards is typically in sheets of $\frac{1}{2}$ oz. and 1 oz. per square foot in weight or 0.0007 and 0.00134 inches nominal thickness. In other words - one ounce of copper will cover one square foot when it is rolled out to a thickness of 0.00134" or 1.34 mils. 1 oz. = 1 square foot 1.34 mils thick

Printed circuit boards are something that every electronic device needs to function. Without one, the electronic device will not work as intended. There is an endless need for PCBs. Many who enjoy tinkering and building their own electronics work on PCBs themselves. PCB hobbyists continue to grow and are looking for tools to assist them.
