SAP GRC access control uses UME roles to control the user authorization in the system. An administrator can use actions which represents the smallest entity of UME role that a user can use to build access rights. One UME role can contain actions from one or more applications. You have to assign UME roles to users in User management engine (UME).

Early detection of risks is crucial for effective decision making and a well designed ERP system should provide real-time and reliable access to information. It should incorporate both an effective internal audit system and an internal control system so that your company can effectively manage its assets in a competitive environment, against a shifting regulatory landscape.
