

## Rudin Chapter 3 Solutions

As recognized, adventure as without difficulty as experience very nearly lesson, amusement, as skillfully as covenant can be gotten by just checking out a book rudin chapter 3 solutions as well as it is not directly done, you could take on even more on the subject of this life, something like the world.

We offer you this proper as with ease as simple quirk to get those all. We present rudin chapter 3 solutions and numerous ebook collections from fictions to scientific research in any way. in the middle of them is this rudin chapter 3 solutions that can be your partner.

Let  $a_n = 1/n$ , and it is clear that it diverges. Let  $a_n = 1$  whenever  $n$  is a square and  $a_n = 2^{-n}$  otherwise. This series clearly diverges, since the terms do not tend to 0 as  $n \rightarrow \infty$ . Then  $\sum_{n=1}^{\infty} (a_n)^2 = \sum_{n=1}^{\infty} \frac{1}{n^2} + \sum_{n \neq k^2} \frac{1}{4^n} = \frac{\pi^2}{6} + \frac{1}{3} < \infty$  and the series therefore converges.

Theorem 3.20(c). By the root test,  $\sum a_n$  converges. — (d) We skip this question. 7. Prove that the convergence of  $\sum a_n$  implies the convergence of  $\sum x^n$

AoPS Community Chapter 3 Selected Exercises (Rudin)

Solution 1. Note that  $a_n = p^{n+1} - p^n = p^n(p - 1) > 1/2 p^n$ ;  $\sum a_n$  diverges. Therefore,  $\sum a_n$  diverges. Solution 2.

Alternatively, we can evaluate  $\sum_{n=1}^{\infty} a_n$  explicitly. Note that  $\sum_{n=1}^N a_n = p^1 + 2p^2 + \dots + p^N = p \frac{p^N - 1}{p - 1} = \frac{p^{N+1} - p}{p - 1}$ . Therefore,  $\lim_{N \rightarrow \infty} \frac{1}{N} \sum_{n=1}^N a_n = \lim_{N \rightarrow \infty} \frac{1}{N} \frac{p^{N+1} - p}{p - 1} = +\infty$ . (b) We claim that  $\sum a_n$  converges. Note that  $|a_{n+1}| = p^{n+1} - p^n = p^n(p - 1)$

Chapter #2 Dominique Abdi 2.1. Prove that the empty set is

a subset of every set. Solution. Assume the contrary, that

there is a set  $E$  such that the empty set is not a subset of  $E$ .

Then there is an element  $x \in E$ ; such that  $x \in \emptyset$ , but this

contradicts that the empty set is empty.

Rudin Chapter 3 Solutions - jenniferbachdim.com

Problem 3 By definition  $Z(f) = f^{-1}(\{0\})$ . The set  $\{0\}$  is closed

and  $f$  is continuous, so  $Z(f)$  is closed. Problem 4 If  $y \in f(X)$

then there exists  $x \in X$  such that  $f(x) = y$ . By the density of  $E$

in  $X$  there is a sequence  $\{x_n\}$  in  $E$  with  $x_n \rightarrow x$  in  $X$ . By the

continuity of  $f$ ,  $f(x_n) \rightarrow f(x) = y$  so  $f(E)$  is dense in  $f(X)$ .

Suppose  $g(p) = f(p)$  for all  $p \in E$ .
