Send and receive a struct via GOB; The first part, sending simple strings, shall demonstrate how easy it is to send data over a TCP/IP network without any higher-level protocols. The

second part goes a step further and sends a complete struct over the network, with strings, slices, maps, and even a recursive pointer to the struct itself.

The TCP/IP model use the internet layer to define the routing standards and protocols, while OSI uses

the network layer. The TCP/IP header size is 20 bytes while the OSI header is 5 bytes. The TCP/IP model is a protocol-oriented standard, whereas the OSI model is a generic model based on the functionalities

of each layer.

What is TCP/IP and How Does it Work?

IP addresses: Networks and
hosts An IP address is a
32-bit number that uniquely
identifies a host (computer
