Topology is a type of geometry developed in the 19th century. Its name's Greek origin, which is 'topos', means place. Unlike the other types of geometry, it is not concerned with the exact dimensions, shapes, and sizes of a region. It studies the physical space a surface unaffected by distortion contiguity, order, and position.

Space is the boundless three-dimensional extent in which objects and events have relative position and direction. Physical space is often conceived in three linear dimensions, although modern physicists usually consider it, with time, to be part of a boundless four-dimensional continuum known as spacetime. The concept of space is considered to be of fundamental importance to an understanding of ...
