Argon is suitable for easier starts and alternating current applications, as well as for longer arcs at lower voltages. 7 In pure form, argon is often used with aluminum and nonferrous metals. The addition of helium improves argon's heat transfer properties, and combining argon with carbon dioxide or oxygen can help stabilize the arc. 8

What Are Welding Shielding Gases, And Why Are They ...

A welding power supply is a device that provides or modulates an electric current to perform arc welding. There are multiple arc welding processes in common use ranging from relatively simple Shielded Metal Arc Welding (SMAW) to more complicated welding processes using inert shielding gas like Gas metal arc welding (GMAW) or Gas tungsten arc welding (GTAW).
